Pairs of Angles

Certain pairs of angles are important in geometry. Two of these pairs are complementary angles and supplementary angles.

If the sum of the measures of two angles equals 90° , the angles are **complementary**. When complementary angles are placed next to each other, they form a right angle.

When the sum of the measures of two angles is 180° , the angles are **supplementary**. When supplementary angles are placed next to each other, they form a line.
