

ANTELOPE VALLEY COLLEGE

Fire Technology

The Courage to Care

Everybody knows that being a firefighter takes considerable courage. But effectively responding to fire-related emergencies also requires extensive knowledge and training in the latest firefighting techniques and technologies.

AVC's Fire Technology degrees and certificates are designed to do just that, whether you're a new student looking to enter the industry or current professional looking to upgrade your skillset and paycheck. Hands-on instruction starts with the basics of fire protection and prevention, and culminates with "live-fire" training that includes ventilating buildings, putting up ladders, using rope rescue systems, and more.

Specialized programs include the Firefighter 1 Academy, which provides trainees with the knowledge and skills they need to complete training for the California State Fire Marshall Firefighter 1 certification, and the Wildland Fire Technology certificate, which gives students the training required to obtain entry-level positions as a temporary, on-call wildland firefighters.

With the average salary for firefighters in California being \$74,000 and reaching as high as \$135,240, now might be the perfect time to join the ranks of one of California's most courageous cohorts!

Degrees & Certificates

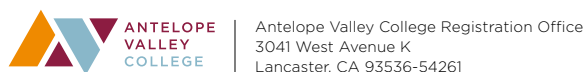

-  Associate in Science - Fire Technology
