

August 31, 2018

Terry Cleveland
Director of Risk Management and Environmental Health
ANTELOPE VALLEY COMMUNITY COLLEGE DISTRICT
3041 W Avenue K
Lancaster, CA 93536

RE: HAZARDOUS MATERIALS INVENTORY REPORT

Dear Mr. Cleveland:

Enclosed is the report for the Hazardous Materials Inventory (HMI) conducted for the Antelope Valley Community College District on June 11, 2018. The HMI was conducted in accordance with requirements set forth by local, state and federal regulatory agencies.

It has been a pleasure to be of service to the District in the area of Loss Control/Risk Management, and to assist you with providing a safe environment for students and the general public. If you have any questions concerning the report, kindly contact me directly at (562) 253-5454, at your convenience.

Sincerely,

Vincent Marin

Vincent Marin
Consultant
Loss Control/Risk Management

Enclosure

cc: Susan Langston, Keenan & Associates, Torrance
Suzanne Trowbridge, Keenan & Associates, Riverside
Patricia Swint, Keenan & Associates, Torrance

◆ 2018 Keenan & Associates Lic. # 0451271

The report is based on conditions and operations that existed at the time of the inspection. The information contained in this report does not certify that all locations, unsafe conditions, violations of state, federal or local regulations or laws are in compliance, nor does it conclude that all possible infractions, hazards or hazardous conditions were observed or reported.

HAZARDOUS MATERIALS INVENTORY REPORT

August, 2018

PREPARED FOR

ANTELOPE VALLEY COMMUNITY COLLEGE DISTRICT

Prepared By

**Vincent Marin
Consultant**

KEENAN & ASSOCIATES

TABLE OF CONTENTS

- I. INTRODUCTION
- II. ACKNOWLEDGEMENTS
- III. LIMITATIONS
- IV. SHELF LIFE
- V. SAFETY DATA SHEETS
- VI. SCOPE OF SERVICES
- VII. SITES AND AREAS INSPECTED
- VIII. SUMMARY
- IX. PROGRAM REVIEW
- X. IMMEDIATE/HIGH PRIORITY RECOMMENDATIONS
- XI. GENERAL RECOMMENDATIONS
- XII. SITE SPECIFIC RECOMMENDATIONS

I. INTRODUCTION

Keenan & Associates conducted a Hazardous Materials Inventory (HMI) for Antelope Valley Community College District on June 11, 2018. Conditions noted during the HMI that directly relate to safety are listed in sections IX and X of this report. All findings are listed with associated recommendations.

Vincent Marin, Loss Control Consultant, conducted the HMI and prepared the subsequent report. Kathy DiMonte, Project Coordinator, processed the HMI report.

II. ACKNOWLEDGMENTS

Keenan & Associates would like to thank Terry Cleveland for his assistance in completing the HMI.

III. LIMITATIONS

A sincere effort was made to identify hazardous materials at each location within the District. The locations are listed in the Sites Surveyed section. Although the Hazardous Materials Inventory was not an inspection or audit, it is viewed as an opportunity to communicate to the District those safety issues relating to hazardous materials management, which were observed during the course of the inventory.

The information in this report does not conclude that all possible infractions, hazards, or hazardous materials were observed. Keenan & Associates is not responsible for hazardous materials that may be located in areas in which only District staff may be aware and did not make Keenan & Associates aware of it.

Keenan's Hazardous Materials Compliance program services are intended to help clients identify and mitigate hazards and potential Hazardous Materials exposures. Keenan is not responsible for hazardous materials that may be located in areas in which only District staff may be aware of. While we are confident that our services will help our clients create a safer environment, we do not represent or guarantee that we were able to identify all potential hazards, find and inventory all hazardous materials at each site, or offer a fail-safe mechanism for dealing with them. Consequently, we make no promise or representation that clients will recognize improved hazardous materials and/or regulatory compliance fine savings, loss experience or premium savings as a result of these services.

Keenan's Hazardous Materials Compliance program services are not intended to substitute for regular, ongoing internal hazardous materials program efforts. Nor are they intended to replace any required service that is to be routinely performed by licensed or certified service professionals (e.g., hazardous waste disposal contractors and hazardous waste haulers, etc.)

IV. SHELF LIFE

The life expectancy of chemicals can be affected by storage conditions. Ideal conditions (25 degree C at 50% or less relative humidity) will support the maximum shelf life. These times are general and, since storage conditions vary widely, should be taken in that context. All chemicals should be dated upon receiving and again with a "first opened" date. All manufacturer/supplier expiration dates should be strictly adhered to.

Any chemical that has changed physical state over time, either a crystal/powder/etc. becoming liquefied or a liquid that has begun to crystallize should be set aside for immediate proper disposal.

V. SAFETY DATA SHEETS

In accordance with Hazard Communication Standard (HCS) (29 CFR 1910.1200(g)), chemical manufacturers and importers shall obtain or develop a Safety Data Sheet (SDS) for each hazardous chemical they produce or import. Employers shall have an SDS in the workplace for each hazardous chemical which they use.

VI. SCOPE OF SERVICES

The primary purpose of the Hazardous Material Inventory (HMI) is to provide the District with a list of all the hazardous materials in the workplace. This will assist the District in complying with Title 8 of the Hazard Communication Regulations and also in completing their Hazardous Material Business Plan reporting requirements under the California Fire Code, California Code of Regulations (CCR), Title 24, Part 9, and California Health and Safety Code (CHSC) Chapter 6.95, Section 25505.

Locations that are typically inventoried include, but are not limited to:

Agriculture/Horticulture	HVAC Supply
Health Sciences (i.e., Nursing, EMT)	Industrial Technology
Aquatic Center	Jewelry
Auto Technology	Maintenance & Operations (Facilities)
Classified /Support Areas	Natural Science (i.e., Chemistry, Life Science)
Construction Technology	Performing Arts/Scene Shop
Cosmetology	Photography
Custodial Supply	Physical Education
Faculty Workroom/Copier Room	Power Plant(s)
Fine Arts	Warehouse
Food Service/Cafeteria	

VII. SITES AND AREAS INSPECTED

The following areas were inspected at the sites listed below:

- Antelope Valley Community College District
 - ANTELOPE VALLEY COLLEGE PALMDALE CENTER
 - | CHEMICAL STOCKROOM 172
 - ANTELOPE VALLEY COMMUNITY COLLEGE
 - | CENTRAL PLANT | FA1 101 ART CLASSROOM | FA1 120 CERAMICS YARD | FS 141 PLUMBING SHOP | FS 142 MAINTENANCE SHOP | FS 143 TOOL CRIB | FS 146 LOCK SHOP | FS 147 PAINT SHOP | FS 148 ELECTRICAL SHOP | FS 149 HVAC SHOP | FS 150 CAMPUS EVENTS SHOP | FS 152 GROUNDS SHOP | FS 160 CUSTODIAL SHOP | FS 165 MOTOR POOL SHOP | FS 2 PAINT STORAGE | FS 3 - HAZARDOUS WASTE STORAGE | FS 3 HAZARDOUS WASTE STORAGE | FS 5 POISON STORAGE | FS CART STORAGE AREA | FS YARD | FS YARD FLAMMABLES CABINETS | GYM 150 POOL CHEMICAL STORAGE | HS 161 BIOLOGY | HS 161 BIOLOGY PREP | HS 229 CHEMISTRY PREP | HS 235A CHEMISTRY PREP | HS 235B CHEMISTRY PREP | HS 235C CHEMISTRY PREP | HS 235D CHEMISTRY PREP | PA 104 SCENE SHOP STORAGE | SCT 108/110 KITCHEN | TE1 109 PHOTOGRAPHY | TE2 WELDING | TE2 WELDING YARD | TE4 HORTICULTURE STORAGE | TE5 HORTICULTURE OUTDOOR CAGE | TE6 AUTOMOTIVE | TE7 101 AFAB LAB | TE7 104 TOOL ROOM | TE7 105 HVAC LAB | TE7 106 STORAGE | TE7 108 REFRIGERATION LAB | TE8 AUTO BODY
 - FOX FIELD
 - | MAIN HANGAR | MAIN HANGAR CORROSIVES CABINET | MAIN HANGAR FLAMMABLES CABINET | OUTSIDE HANGAR FLAMMABLE CABINET
 - PALMDALE REGIONAL AIRPORT
 - | LA/PALMDALE REGIONAL AIRPORT

VIII. SUMMARY

Antelope Valley Community College District continues to work diligently toward compliance improvements in the handling and storage of hazardous materials and wastes. A majority of both chemical and waste material housed at different locations was stored in a proper and secure manner, limiting any threat of accidental exposure. The District has shown many improvements over the course of one year, with a majority of corrections addressed and maintained throughout the year. All faculty and staff understand the District's expectations regarding hazardous material storage and handling. Although many improvements have been made since the last HMI inspection, a common occurrence was the tendency for packaging/shipping materials to accumulate in areas of high traffic.

It was noticed that shipping materials (i.e., boxes, popcorn packaging, etc.) of hazardous chemicals and other supplies can sometimes accumulate in labs or walkways. It is imperative that walkways be clear of all tripping hazards; this practice is extremely important inside of the laboratory setting. If necessary, designate a room for broken down shipping boxes and develop a more frequent schedule for custodial staff to address these needs.

Another common observance throughout the District was the lack of inspection tags located at the emergency eyewash and shower stations. A majority of the emergency eyewash and shower locations did not have an inspection tag to sign off on. Emergency eyewash and shower stations should be tested on a monthly basis to ensure functionality and to aid in cleaning out debris lodged inside the station piping. Ensure a clear path and use zone is kept clear to allow for proper accessibility to these stations.

Currently, the ranking of recommendations is a High, Medium or Low priority. Ranking is assigned at the end of each recommendation. This ranking system is designed to assist districts with prioritizing concerns/recommendations. High, Medium or Low will be included in the specific recommendation. High and Medium priorities are ranked due to a potentially dangerous condition that may exist and/or potential concern for violation notice by local, state, or federal agencies exists. Low priorities are ranked due to a potential warning condition that may exist and/or potential for correction notice by local, state, or federal agencies.

IX. PROGRAM REVIEW

Hazardous Communication

Priority: **EFFECTIVE**

Survey Findings:

The District continues to have a chemical inventory conducted by Keenan & Associates annually, maintaining an accurate record between inventories and reporting any changes. A district-wide Hazard Communication Program has been developed and implemented, aiding in minimizing accidental exposures along with other hazards. A majority of hazardous material was properly labeled and legible at all sites. Campus custodial storage locations were observed to be in organized condition and locked at all times, preventing unauthorized access. Safety Data Sheets (SDS) were observed at all locations containing hazardous material; all were accessible and in legible condition. The District provides hazard communication training to all employees who may work with or be exposed to hazardous material.

Corrective Action:

No corrective action required. Maintain clear walkways and accessibility to all emergency eyewash and shower stations. Ensure all NFPA signage is up-to-date and legible.

Chemical Hygiene

Priority: **EFFECTIVE**

Survey Findings:

The District Chemical Hygiene Plan is up-to-date and easily accessible to all employees who may work with or come across hazardous material. Standard Operating Procedures are set in place for handling hazardous material and are expected to be adhered to by all faculty and staff. All fume hoods are inspected annually and are in proper functioning order. Chemical spill kits are readily available in areas where potential chemical spills can occur. Inspection tags are missing on some emergency eyewash and shower stations.

Corrective Action:

Install inspection tags on all emergency eyewash and shower stations. Ensure a proper inspection is performed on a monthly basis to meet safety compliance criteria. Many items are available to aid in testing the emergency eyewash and shower stations, while limiting clean-up.

Hazardous Waste

Priority: **IN PROGRESS**

Survey Findings:

The Hazardous Waste Program is executed fairly well at AVCCD. At Antelope Valley College, waste oil is handled appropriately by Facilities Staff; waste oil generated by the Auto Shop is handled by Facilities Staff as well. All hazardous waste is collected twice per year as necessary; pickups are arranged by Facilities and Risk Management. All hazardous waste was labeled and contained secondary containment; a single barrel of hazardous waste was unlabeled in an Art classroom. Hazardous waste was found to be stored inside of chemical fume hoods in laboratories, allowed to evaporate.

Corrective Action:

Ensure all hazardous waste is properly labeled and stored in such a way as to prevent accidental exposure and unauthorized access. Remind all staff that hazardous waste containers are to be closed when additions are not being made. All containers containing hazardous waste should not be filled more than 75% as to allow for potential gas build up. Remind staff that chemical fume hoods are not storage devices for chemicals. Do not

continue to allow hazardous waste to evaporate off via chemical fume hood vacuum. All chemical fume hoods should be cleaned and shut down at the end of the day. Consider having staff review proper chemical fume hood practices.

X. IMMEDIATE/HIGH PRIORITY RECOMMENDATIONS

Location: Antelope Valley Community College District - ANTELOPE VALLEY COMMUNITY COLLEGE - FS 5 POISON STORAGE

Priority: High

Description: An eyewash unit, located in the FS Yard between the Paint Storage and Poison Storage bins, is blocked by construction materials. These construction materials are also blocking access to the electrical boxes located adjacent to the eyewash unit. Both the eyewash unit and electrical box should be accessible at all times for use. A minimum clearance of three (3) feet is necessary for these stations. It is recommended that this material be removed and proper accessibility be reinstated. Ensure monthly eyewash station testing is conducted to ensure functionality.

Location: Antelope Valley Community College District - ANTELOPE VALLEY COMMUNITY COLLEGE - HS 235A CHEMISTRY PREP

Priority: High

Description: Beakers used to house chemical waste temporarily were found to be left inside of chemical hoods to evaporate. This practice is ill-advised as this is not the purpose of a chemical fume hood. Evaporated waste can readily react with itself or other material inside fume hood vent(s). All hazardous waste should be segregated by type, properly identified using EPA approved labels, and secured until removed for proper disposal. Open chemical containers should be provided with lids or transferred to other containers that can be closed.

Location: Antelope Valley Community College District - FOX FIELD - MAIN HANGAR FLAMMABLES CABINET

Priority: High

Description: The State's Hazard Communication Law requires appropriate labeling on containers of hazardous substances or mixtures having hazardous ingredients. Some containers were noted having faded,

missing or unreadable labels. Several chemical containers were labeled with only the chemical name or formula. All primary and secondary container(s) should be properly labeled with the product name, primary hazard, harmonized signal word, pictogram, and precautionary statements. Due to the lack of proper labeling, these chemicals were not included in the inventory.

XI. GENERAL RECOMMENDATIONS

XII. SITE SPECIFIC RECOMMENDATIONS

Location: Antelope Valley Community College District - ANTELOPE VALLEY COMMUNITY COLLEGE - FA1 101 ART CLASSROOM

Priority: Medium

Description: Aerosol paints and solvents were found to be stored inside classroom storage room, and in various cabinets, bags and boxes. All flammable material should be stored in an approved cabinet or an area designed for flammable material storage. It is recommended that a flammable cabinet be provided and installed as soon as time permits. Housekeeping should be improved in this area.

Location: Antelope Valley Community College District - ANTELOPE VALLEY COMMUNITY COLLEGE - FA1 101 ART CLASSROOM

Priority: Medium

Description: A 55-gallon drum of waste is stored inside of the classroom toward the rear of the class, but without an identification label. All hazardous waste should be properly identified using EPA approved labels. Due to the hazardous substances stored in the hazardous material or waste handling areas, an emergency eyewash station and deluge shower should be installed. It is recommended that this container of hazardous waste be properly labeled using EPA approved hazardous waste labels.

Location: Antelope Valley Community College District - ANTELOPE VALLEY COMMUNITY COLLEGE - FS 143 TOOL CRIB

Priority: Medium

Description: Flammable material including solvents, paints, aerosols and lubricants are stored outside of an approved flammable cabinet. All flammable material should be stored in an approved cabinet or an area designed for flammable material storage. Please determine a single location to store hazardous material within this area. It is recommended that housekeeping improvements be made in this area; ladders should be secured; walkways cleared of obstructions and tripping hazards.

Location: Antelope Valley Community College District - ANTELOPE VALLEY COMMUNITY COLLEGE - GYM 150 POOL CHEMICAL STORAGE

Priority: Medium

Description: Hydrochloric acid, also known as muriatic acid, is stored at ground level and without a means of secondary containment. To contain spills, containers of hazardous waste should be provided with a means of secondary containment. It is recommended that secondary containment be provided for this material; please explore the many options available.

Location: Antelope Valley Community College District - FOX FIELD - MAIN HANGAR FLAMMABLES CABINET

Priority: Medium

Description: Open chemical containers should be provided with lids or transferred to other containers that can be closed. Please provide a lid for the pictured container, otherwise transfer to a secondary container and properly label with all required fields.

Location: Antelope Valley Community College District - ANTELOPE VALLEY COMMUNITY COLLEGE - FA1 101 ART CLASSROOM

Priority: Low

Description: At the time of the inspection, the cabinets pictured were locked and the contents within could not be inventoried. When time permits please determine the contents within the cabinets and provide an accurate inventory to Risk Management. Refrain from storing flammable material inside of cabinets not approved flammable cabinets. It is recommended that all flammable material used for this class be stored in a single location such as a flammable cabinet.

Keenan SDS Quick Start Guide

Loss Control Consultant Name and telephone number:

Access Keenan SDS using URL:

Copy and paste the URL into your web browser.

The landing page is the first screen that appears when any employee visits your Keenan SDS site. The majority of the landing page displays the **locations** and **collections** of chemicals that are virtually stored on your site. Employees can search for chemicals and view the Safety Data Sheets that are organized into collections.

The **search** bar in the landing area allows employees to search for a Safety Data Sheet. Administrators in your Keenan SDS system have the option to open up this search to the entire repository or this can be limited only the districts inventory.

Access Keenan SDS using P&C Bridge

Log into P&C Bridge:

- Select **Resource** from the top tool bar
- Select **Keenan SDS** from the application list

The **Administration View** within your Keenan SDS site is organized in four main areas, which are named locations, collections, docs, and inventory.

There are three **search** options for employees without administrative access: Uploaded Sheets, Inventory and Repository. If Inventory is chosen, the general employee can only search through the safety sheets that have been added to a collection in the site. Uploaded Sheets refers to only those that have been uploaded into the site, regardless of whether or not they are in a collection.

The **poster** button takes you to a printable PDF with a QR code and link, which both lead you to the SDS inventory.

Keenan's Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

Printing Container Labels:

Container labels can be created and printed for any Safety Data Sheet in the system. To print a container label, follow the directions below.

- First, select the desired Safety Data Sheet and click on the **Container Labels** button.
- Next, select the size of the labels you would like to print.
- Once a size is chosen, select the number of labels you would like to print by clicking on the first and last label of the selection (see screenshot to the right).
- When your selection is finalized, click the blue Print button at the bottom of the page.

SECONDARY CONTAINER LABEL

BACK TO TEMPLATES

AVERY 5160
Select the first and last label you would like to print.

Labels 01 - 014
NUMBER OF LABELS: 14

PRINT CANCEL

Keenan's Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

Keenan SDS Administrative Guide

Loss Control Consultant Name and telephone number:

Access Keenan SDS through P&C Bridge

Log into P&C Bridge

- Select **Resource** from the top tool bar
- Select **Keenan SDS** from the application list

The Administration View is organized in four main areas.

Locations: you can create and organize virtual locations for each building.

To Add a New Location:

- First, click on the **Locations** tab.
- Click the + **Location** button.
- Type the name of the location.
- Click **Create**.
- Click the eye icon to the right and change to **Viewable**.

To Delete a Location:

- Click on the ☰ icon to the right of the location.
- Click **Delete**.
- Lastly, click **Yes**.

Collections: are used to store Safety Data Sheets and documents for each department. To set up and maintain your collections create one collection for each of the major areas within a building.

To Create a New Collection:

- Select the **Collections** tab from the top.
- Click + **Collection**.
- Name the collection.
- Click **Create**.

To Add Collections to a Location:

- Click over the **Locations** tab.
- Select the location you wish to add a collection to.

Keenan's Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

- Click + **Collection** and the list of collections will appear.
- Click the desired collection from the list.
- You can also add a single SDS to a **Location** by clicking the + **Add Item** button, selecting **Safety Sheet** and searching the repository.

Once the information is entered, check the boxes for any collections you would like to add the sheet to.

Docs: where you can upload Safety Data Sheets and documents that you want to store on your Keenan SDS site.

Lastly, click the **Save** button in the upper right hand corner. The system will confirm the upload with the message below.

Success! You have finished processing your uploaded Documents!

To add to the **Locations** area, click on the **Locations** tab and click the + **Add Item**. You can add the document to a specific location by first selecting the specific location, then clicking the + **Add Item** button.

To Add a Safety Data Sheet or a Document:

My Uploads:

If the Safety Data Sheet is saved on your desktop, click over it and drag it into the **Drag & Drop** area.

To view all of your uploaded safety sheets and site documents, go to the **My Uploads** section of the **DOCS** tab and select the list you would like to view (Safety Sheets or Site Documents) by using the drop down menu.

NOTE: You can upload several Safety Data Sheets at once by dropping a zip file into the **Drag & Drop** area.

Next, you will see the sheet(s) appear with the pending status in the **Upload Queue** area.

Inventory: lists all of the Safety Data Sheets that have been saved to your site's inventory. The **Filter Results** box can be used to search for products.

Name	Effective Date
01296, DRY CHLORINE BLEACH	1989-11-30
1000 PPM - AMMONIA	1992-03-05
129000-3 BLUE WINDEX	1994-06-27
478 ALKA-SELTZER TABLETS	1986-07-10

Click over the pending document to finish the upload process.

Keenan's Loss Control services promote safety awareness, and assist in the identification of conditions which may pose a risk of injury. We do not suggest that following our recommendations will eliminate all risk of injury or will result in improved loss experience.

USING YOUR COMPREHENSIVE HAZARDOUS MATERIALS INVENTORY

In addition to fulfilling the Hazard Communication Standard requirement for the maintenance of an inventory of hazardous materials in the workplace, this inventory can be used as a management tool to better control the on-site and storage of hazardous materials.

The following information will serve as a guide to obtaining the greatest benefit from this inventory:

INVENTORY USES

To Assist With The Hazardous Materials Business Plan Reporting Requirements

State law requires reporting to the local administering agency when hazardous materials are stored at an individual site in quantities greater than 500 pounds (solid), 55 gallons (liquid), or 200 cubic feet (gas at standard temperature and pressure). These are the threshold planning quantities. The inventory can be reviewed to determine if those quantities are exceeded at any location. First, look at the “quantity” column for numbers exceeding these values. Next, add all similar items at the individual site(s) such as all combustible or water based paints, or all motor oil, or any other materials, and then determine if these aggregate quantities exceed the threshold planning quantities for each type of material. Contact your administering agency for their specific reporting procedures.

To Determine The Hazardous Materials To Be Included In Your Hazard Communication Training

Match the chemicals listed at each location with the classification of employees working at the site. This will assist you in determining the need for Hazard Communication training.

To Assess Compliance With The Hazard Communication Standard

Cal/OSHA requires a Material Safety Data Sheet (MSDS) for every hazardous material used in the workplace. Match listed items with the appropriate MSDS. If the MSDS is not currently on-site, it must be obtained from the distributor or manufacturer. Chemicals lacking an MSDS on-site are probably:

- Donated
- Purchased by an employee on their own
- Old materials used by a former employee and “grandfathered” into the location
- Materials left by employees which may be needed at another location
- Inherently, “waste like” and abandoned with no intended use; and therefore, classed as a hazardous waste

Look for unknown items or manufacturers in the inventory. These chemicals may have incomplete or missing labels, a violation of the Hazard Communication Standard.

To Assess Risk Or Design Your Fire Prevention Plan

Make general summaries of similar materials at each site, i.e. all combustible paints, all flammable spray cans, all corrosives, etc. Determine if they are in excess of the material needs of that site?

Is there excessive risk at a particular site? (E.g. Where are large quantities of flammable liquids stored? Or compressed gases?) How can these materials be addressed in your fire prevention plan?

To Identify Extremely Hazardous Substances

Most commonly, chemicals found in the science labs vary in their hazard severity. Chemicals denoted in the inventory on diskette that are recommended for removal indicate that these substances may be extremely hazardous. Special precautions should be taken when handling and storing these substances. These chemicals should be evaluated to determine if the value of a specific chemical outweighs the risks presented.

To Assist With The Determination Of Spill Response Needs

Cal/OSHA, as well as other regulatory agencies, requires facilities handling and storing hazardous materials to have procedures and equipment in place for responding to spills. The type and quantity of hazardous materials at your facilities determines the procedures and the type of spill response materials and equipment needed. Selective absorbents are commercially available to handle various types of spilled products (i.e. corrosives, oils, solvents, etc.). Personal protective equipment may also be necessary to handle a spill. You can use the inventory to determine your spill potentials. The hazard type listed in the inventory for each chemical product will help you determine the type of spill absorbent materials to use. The Material Safety Data Sheets you are required to have available for all hazardous materials in the inventory will not only guide your spill response, but also provide information regarding personal protection.
