NON-DISCRIMINATION POLICY

Antelope Valley College prohibits discrimination and harassment based on sex, gender, race, color, religion, national origin or ancestry, age, disability, marital status, sexual orientation, cancer-related medical condition, or genetic predisposition. Upon request, we will consider reasonable accommodation to permit individuals with protected disabilities to (1) complete the employment or admission process, (b) perform essential job functions, (c) enjoy benefits and privileges of similarly-situated individuals without disabilities, and (d) participate in instruction, programs, services, activities, or events.

ANTELOPE VALLEY COLLEGE DISTANCE EDUCATION AND TECHNOLOGY COMMITTEE MINUTES

September 10, 2013 3:30 p.m. to 4:30 p.m. L 201

To conform to the open meeting act, the public may attend open sessions

1. CALL TO ORDER AND ROLL CALL

The Distance Education and Technology Committee (DETC) meeting of September 10, 2013, was called to order at 3:30 p.m. by Co-Chairs Dr. Nancy Bednar and Dr. Charlotte Forte-Parnell.

2. OPENING COMMENTS FROM THE CO-CHAIRS

Dr. Nancy Bednar suggested a goal of DETC should be to define what an online course is, and set the criteria. She discussed the necessity to evaluate online classes and proposed the discussion include the Academic Senate. She noted the observation form is insufficient for online classes. She addressed the need for a rubric for an evaluation form, as the current form does not work for online classes.

Dr. Charlotte Forte-Parnell gave a presentation regarding Distance Education, compiled from the 2012-2013 Data Mart Distance Education Full-Time Equivalencies, and the Fall 2012 Distance Education Student Satisfaction Survey. She thanked Dr. Meeta Goel for creating a slide presentation of the material. Dr. Parnell reported FTEs are up by 30%, and highlighted the following:

- AVC retention = 88% non-distance education courses vs. traditional retention= 84%
- AVC online retention = 80% vs. state average retention = 77%
- AVC success via online = 56% vs. state average = 72% (16% gap)

Dr. Parnell suggested review of a previously distributed handout to help determine what AVC can do as an institution to increase success. Nancy Masters, Senate Coordinator, will distribute the presentation via email. Dr. Parnell asked members to review the report and pay attention to where AVC meets and does not meet benchmarks. Members defined *success* as *completing the class with a passing grade*. Dr. Parnell noted that as money becomes available, the issues must be addressed.

Dr. Parnell reported an overall response rate among many students is satisfaction with online education at AVC. She noted the sample size is low. Dr. Parnell and Dr. Goel will work to refine areas for more indepth responses, to determine how to best-assist assist students to be more successful and have a more positive experience in online education.

Members will review the complete report and discuss at the upcoming DETC meeting on September 24, 2013.

3. OPEN COMMENTS FROM THE PUBLIC None.

4. APPROVAL OF MINUTES

a. August 27, 2013 Minutes – attachment A motion was made and seconded to approve the minutes of the August 27, 2013 meeting. Motion carried.

5. ACTION ITEMS None.

6. DISCUSSION ITEMS

A motion was made and seconded to change the agenda, to move Dr. Meeta Goel to 6.a. - the first item under Discussion. Motion carried.

a. Institutional Effectiveness, Research & Planning Report – Dr. Meeta Goel, Dean Dr. Meeta Goel reported that although studies suggest they are fairly equal, retention and success in online learning has not caught up with traditional learning. She identified the need for contact with them, and an online orientation to determine if online learning is the best course of action of each student. Dr. Goel explained that getting educational goals for students is critical; recognizing the reason the student is enrolled, as some are after a degree.

Dr. Goel reported the data in WEAVE indicates significant work on SLOs, OOs and PLOs. She acknowledged the institutional picture, non-academic learning and connections all need improvement. Processes related to everything, including online learning needs attention. Dr. Goel added that process improvement and connections need to work and flow smoothly for accreditation.

Dr. Goel recognized faculty have done a commendable job with SLOs and PLOs. She recommended improvement in the quality of action plans and following through, and the need to continually review and improve. She recognized AVC for a good job of basics, and better than many colleges out there. She encouraged members to pay attention, and not slack off.

b. Learning Express Report – Diane Flores-Kagan

Ms. Diane Flores-Kagan distributed a flyer: Featured Resources for 2-Year Colleges. According to the Learning Express representative, the Learning Express Library is the only online program that provides totally interactive practice exams that combine state of the art technology with an educational, career-building tool. Ms. Flores-Kagan sent an announcement to faculty the first week of school, and asked members to also help publicize the program. Dr. Bednar noted the resource will help students build skills which will push them into college credit courses more quickly. Dr. Bednar suggested an email with a link to the handout would be helpful.

Ms. Flores mentioned three videos she recently purchased, and will upload into Blackboard:

- Study Skills
- Plagiarism
- Introduction to Critical Thinking
- c. Student Self-Evaluation for Placement
 - AVC's Current Evaluation SORT
 - Cerro Coso College Student Skills Quiz
 - Cerro Coso College Technical Skills Quiz

Dr. Bednar led discussion regarding the Self-Evaluations for Placement she distributed via email earlier in the week. She compared AVC's current evaluation in comparison to Cerro Coso College's Skill Quizzes. She reminded members of the Distance Education Handbook she will edit for AVC use. More information will be forthcoming.

d. 2013-2014 DETC Mission Statement and Goals – attachment

Dr. Bednar discussed the AVC online presence, and encouraged members to look at other online colleges for ideas and comparison. She identified the need for division pages, with the Dean's name and contact information. She reported Human Resources lists the incorrect name for the Vice President of Human Resources. Discussion was made regarding control of the AVC website, and whether it should be under the Foundation or Information Technology. Dr. Bednar identified several areas that need attention and will discuss the issues with President Knudson.

8. ADJOURNMENT

A motion was made and seconded to adjourn the Distance Education and Technology Committee meeting of September 10, 2013 at 4:31 p.m.

NON-DISCRIMINATION POLICY

Antelope Valley College prohibits discrimination and harassment based on sex, gender, race, color, religion, national origin or ancestry, age, disability, marital status, sexual orientation, cancer-related medical condition, or genetic predisposition. Upon request, we will consider reasonable accommodation to permit individuals with protected disabilities to (1) complete the employment or admission process, (b) perform essential job functions, (c) enjoy benefits and privileges of similarly-situated individuals without disabilities, and (d) participate in instruction, programs, services, activities, or events.

Background Regulation Information

Distance Education Courses in the California Community Colleges may be offered under the following requirements:

Regulation Language

What You Should Do

Higher Education Act (HEA) of 2008: "an institution that offers distance education to have processes through which the institution establishes that the student who registers in a distance education course or program is the same student who participates in and completes the program and Blackboard's dashboard statistics is not enough to receives the academic credit."

Authentication (HEA): Students must regularly log in and participate in distance education courses via the college provided course management system under their own college provided identification. Accounting for the students' presence in the course via meet this requirement. Students must also participate in the course work through the course management system.

Regulation Language

What You Should Do

Title 5, section 55200. Definition and Application. Distance education means instruction in which the instructor and student are separated by distance and interact through the assistance of communication technology. All distance education is subject to the general requirements of this chapter as well as the specific requirements of this article. In addition, instruction provided as distance compliant in your courses. education is subject to the requirements that may be imposed by the American with Disabilities Act (42 U.S.C. §12100 et seq.) and section 508 of the Rehabilitation Act of 1973, as amended.

Accessibility (Title 5, section 55200): All course content delivered via distance education must be accessible to the visually and hearing impaired. Captioning and/or other means of providing alternative text and/or audio must be available for content that is a regular component of the course. The list below is the minimum you must do to be

- videos with audio need to be captioned.
- audio files need to have text transcripts.
- images need alternative text or descriptions.
- color should not be used to convey meaning.
- tables should include row and column headers.

Please review this link before completing the survey.

Regulation Language

What You Should Do

Title 5, section 55204. Instructor Contact. In addition to the requirements of section 55002 and any locally established requirements applicable to all courses, district governing boards shall ensure that: (a) Any portion of a course conducted through distance education includes regular effective contact between instructor and student.

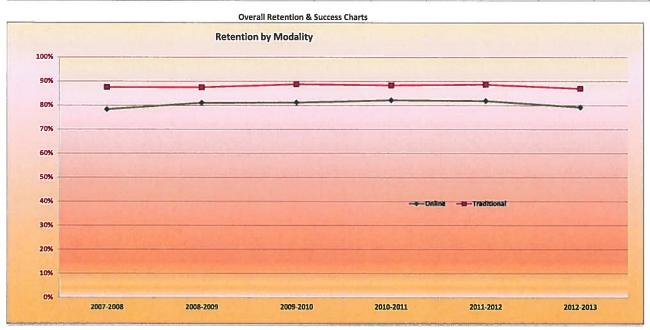

Regular Effective Contact (Title 5, section 55204): REC is defined as an academic and professional matter and as such, a policy was passed by the MSJC Curriculum Committee and the Academic Senate in 2004 that requires specific forms of instructor initiated contact. This policy must be adhered to in all MSJC distance education courses. Please review MSJC Regular Effective Contact before completing the survey. MSJC REC

Some Highlights from CCC Summary Report for All Colleges Participating in the Survey (7-16-13)

Note: AVC's resonse rate was 264 of the total responses (14,894) & red font indicates areas where further probing may be necessary with students (surveys, focus groups, etc.) to see if (and how) the satisfaction of those that were "Neutral" could be addressed and possibly increased for future such surveys. Items with "Neutral" ratings of 20% or greater are recommended for further examination.

#6. Have you ever taken a DE orientation course or workshop at this college? Yes: 41%; No: 59% #7a. Is the course or workshop required before you can take a DE course at the college or is it voluntary?

#7b. Is it a credit course for which you receive credit or is it a workshop where no credit is issued?

#7c. How satisfied were you with this DE orientation course/workshop? #20. The learning activities in this course required application of problem-solving skills which facilitated my learning.

#21. I feel this online class experience has helped improve my written communication skills.

#22. The learning activities in this course required critical thinking which facilitated my learning.

#23. The course syllabus facilitated my learning.

#24. The activities in class facilitated my learning.

#29. In this class, the teacher was an active member of the discussion group offering directionto posed comments.

#30. I received timely feedback (within 24-48 hours) from my teacher. #31. I felt frustrated by the lack of feedback from my teacher.

#32. I was able to get individualized attention from my teacher when

needed.

#34. Although I could not see the teacher in this class, I felt his/her presence.

#36. In this class, the online discussion board provided opportunity for problem solving with other students.

#39. The class created a sense of community among students.

#41. I received timely (within 24-48 hours) feedback from students in

#42. This class encouraged students to discuss ideas and concepts covered with other students.

#44. I find working with computers very easy.

#47. Computers make me much more productive.

#48. Using computers makes learning more interesting. #52. Lam very satisfied with this online course.

#53. I would like to take another online course.

#54. This DE course met my learning needs.

#55. I would recommend this course to others.

#56. I learned as much in this DE course as compared wo a F-2-F course.

#57. I believe DE courses are as effective as F-2-F courses.

#58. There was an effective ratio of graded vs. ungraded work.

PRACTICAL STRATEGIES FOR MOTIVATING AND RETAINING E-LEARNERS

Author: Andrea Henne, EdD

Dr. Henne is the Dean of Online and Distributed Learning at a multi-campus community college district in California, which currently enrolls over 12,000 students each semester in online courses. She has extensive experience at the community college and university levels in creating accessible online learning environments that meet best practices in technology-based teaching, faculty development, student learning outcomes, and quality standards. Her online teaching experience includes teaching Instructional Technology at National University, and Critical Thinking and Problem Solving at DeVry Online in the College of Liberal Arts and Sciences. She also teaches Educational Psychology in the DeVry Graduate School of Education. Educated at UCLA in Higher Education Leadership (doctorate) and Business-Economic Education (masters), she is a frequent presenter at conferences, workshops, and webinars on the topics of best practices in technology-based teaching, faculty development, student success, course assessment, and quality standards.

Abstract

The question of why so many students who are enrolled in e-learning classes drop or perform more poorly than their traditional classroom counterparts is important to examine if we are to continue to advocate for growth in e-learning course and program offerings. The author has been tracking the research, the writings, and the opinions on this topic for more than a decade. This purpose of this chapter is to review and analyze what strategies have proven to be effective in improving the motivation and retention rates. Three components of the problem: student factors, institutional factors, and instructional factors are discussed; and suggested solutions are proposed. By taking a closer look at the issues, raising key questions, and exploring a variety of methods for addressing the problem, e-learning leaders will gain insight and take away suggested action steps to explore in their own institutions.

Introduction

Student retention in e-learning is a broad topic with numerous components, including student readiness, student motivation for learning, faculty preparation, institutional resources, and instructional strategies. In this chapter, we will examine the major factors that impact student motivation and retention in e-learning and present a variety of best practices that have been shown to increase course completion rates. Each section in the chapter begins by asking a key question. The responses to the key question provide

effective practical strategies that can be adapted to meet the varying needs and characteristics of higher education e-learning programs.

Leaders of successful e-learning programs look closely at their data on student retention and examine the trends, underlying causes, and factors that have positive and negative impacts on rates of retention. The focus on student retention in e-learning is significant because of the persistent gap between the retention and success rates of online students when compared with traditional oncampus students. Students enrolled in an online course (e-learning) typically have a lower rate of retention than students enrolled in a traditional oncampus course. Student success rates, which are determined by course grades of A, B, or C, are also typically lower for students enrolled in online courses. (California Community Colleges Chancellor's Office, 2011).

Retention rates are calculated based on enrollments several weeks into the start of the semester, and therefore do not usually record the number of students who drop within the first several days or first week of the course. Taking these early dropouts into account, an online course that begins on the first day with 30 students may see as few as half persisting through the end of the course. Some students who enroll do not even login and begin the course—these "no shows" as they are called, are also an issue worth examining.

In the following pages, we will take a closer look at the issues, examine what we've learned from practitioners and researchers in the field, and provide solutions for e-learning leaders to explore in their own institutions.

Key Question No 1: What are some of the most frequently reported <u>student factors</u> that impact online student retention?

Student Retention Factors

The degree to which a student has the following abilities, skills, motivation, and knowledge will determine whether the student is likely to be successful in e-learning. Based on a review of the information published over the past several years as well as personal experience as an online instructor in both graduate and undergraduate programs, the following have emerged as the most important attributes that a student needs to be successful in online learning:

- Ability to communicate in writing. Since the majority of coursework involves written
 communication through online discussions, wikis, blogs, journals, emails, the student must be
 able to demonstrate clarity and accuracy through correct spelling, grammar, and punctuation.
- Ability to work independently. Students who are used to relying on face-to-face instruction in a
 classroom setting often report a sense of isolation and a need for more individual and
 immediate personal contact and have a difficult time adjusting to a learning environment that
 depends upon their ability work by themselves and seek help when needed. (Wojciechowski
 and Palmer (2005).
- Availability of Time. Students often enroll in e-learning courses because their obligations to
 family and their work schedule prevent them from attending oncampus courses. They view elearning as more convenient and a way to fit coursework into their busy schedules. Yet, the
 most frequently reported reasons for dropping an e-learning course are precisely the same
 reason for enrolling--personal circumstances and work schedule. (Innovations in Online
 Retention Webcast, 2009).
- Clear Expectations. Students who fully understand the requirements for e-learning and the specific demands of each course in which they are planning to enroll are more prepared for success (Ludwig and Dunlap 2003).
- Onscreen Reading Rate and Recall. The facility with which an e-learning student is able to
 read and comprehend the course material directly impacts his/her learning outcomes and
 ability to demonstrate learning in tests and assessments. It is impractical to print out all the
 onscreen material throughout the course; therefore, a successful online student is able to
 adapt to digital learning.
- Persistence. Students who work steadily towards completing their coursework week by week
 and who do not permit outside obstacles or personal challenges to deter them from completing
 the course, then return to enroll in more courses each semester, demonstrate the persistence
 that will lead to success.
- Plan for Graduation or Completion Goal A focus on the rewards that will come with
 completion of the requirements for certification or a degree is a trait that successful students

- possess. Students who follow an individual education plan and who have a clear path towards graduation are more likely to resist the impediments and obstacles along the way (Distance Education Report, 2009).
- Self-discipline. With the competing demands in their busy lives, online students are
 particularly vulnerable to distractions and obligations outside of the course. A strong work
 ethic and belief in their individual strengths provides a successful online learner with a buffer
 to overcome the potential pitfalls.
- Self-motivation. The e-learning environment requires that students have the drive to succeed.
 A combination of internal and external motivational forces are necessary to stay focused and on track. Successful e-learners need to be motivated self-learners (Christ and Ganey, 2007, p. 54).
- Skill in using a computer, laptop or mobile device. Although it is not necessary to be an expert with computers, e-learners must have basic skills and competencies and be able to adapt to a variety of digital tasks. Configuring the computer for e-learning and understanding the Internet connectivity requirements and peripherals such as webcams, browser plug-ins, and external storage devices or cloud storage are foundational requirements that must be in place right from the start.
- Speed and Reliability of Computer and Internet connection. E-learning courses are comprised of onscreen materials, streaming video and audio, files that need to be downloaded, assignments and exams that need to be submitted. Without a fast and reliable computer and a dependable connection to the Internet, a student's ability to meet the course requirements will be in jeopardy.
- Time-management skills. Students often enroll in e-learning courses because they have a busy schedule. Survey responses to a study of Distance Education Retention in the California Community Colleges in 2009 included comments such as: "My work schedule is heavy and a distance education course is more convenient" as one of the most frequently reported reasons for enrolling. And one of the top reasons for dropping an e-learning course was the same--a

busy schedule. (WCET Webcast 2009). Students who are unable to handle the study and work requirements often find themselves falling behind and unable to catch up. Managing time for online learning requires that students have the ability to schedule not only login time to view the e-learning course content, but also study time, and time to work on the assignments and projects. Overcoming the urge to procrastinate and knowing how to manage their time is a critical factor in student retention (Christ and Ganey, 2006, p. 177).

The bulleted list of student retention factors discussed above is arranged in alphabetical order; however, it must be noted that personal traits such as self-motivation, persistence, and self-discipline are probably the most critical and yet are the most difficult to "teach." This reality is particularly true for students who are enrolled at the higher education level. Since these personal traits are so important for being successful in e-learning, institutions must offer the student support services and implement instructional strategies that are discussed later in this chapter.

Student characteristics such as the ability to communicate in writing, the ability to work independently, onscreen reading rate and recall, and technology skills are predictable and can be measured before the class begins; and ideally before the student registers and enrolls. In fact, early intervention is highly recommended as a retention strategy. Learning readiness indicators such as SmarterMeasure™ (www.readi.info) identify these types of skills and personal traits that are necessary for online learning success. Once the individual student's readiness for e-learning has been assessed, then the remediation and supportive attention can be provided. Each student can focus on his/her own areas that need improvement as part of a personal development plan that would need to be completed prior to enrolling in an e-learning course.

Identification of factors that put students at risk for persisting in e-learning was the focus of the community colleges in the SUNY (State University of New York) and led to their creation of a database of risk factors with tips and advice. They recommended that these risk factors be addressed, as described below, prior to starting any e-learning course or program of study (Distance Education Report, 2010, 4,7).

- Academic Advising. Before registration can be completed, an advisor who has been trained in understanding e-learning requirements and student risk factors must review the student's education plan and approve it.
- Developmental needs. When two or more of the retention risk factors are present and the student's academic record shows below average grade point average and/or the student received a low score on an e-learning readiness assessment, enrollment in an online course should be contingent upon improvement.
- Technical factors. For first-time e-learning students, providing an orientation that focuses on the technical aspects of e-learning, including practicing navigating a sample course, using the course tools such as discussions, messaging, quizzes is an important factor in promoting student retention. The orientation could include information about being a successful e-learning student. Ideally, this orientation would be available as part of the pre-registration and advisement process or at least be part of the first activities once the course begins. Online student orientations can be delivered as an on-demand tutorial that students can complete at their own pace, which is more practical than scheduling face-to-face sessions. Conducting live webinar orientations is another method for providing new e-learning students with the information that will help them to be successful. These orientations could be repeated during the first or second week of the semester so that students can ask questions or brush up on some of the pointers that they may have missed.
- Time of registration SUNY recommends that registration in online sections be blocked after the
 course start date. Research has shown that students who register late are less likely to be
 successful (Moltz, 2011). After the official start of classes, a student's registration should require
 that an advisor or the instructor give permission.

Once the course is underway, social, financial, and personal issues often arise that impact student retention. Students need to have access to support services such as counseling, advising, and peer mentoring that they can turn to for help with these personal challenges. Results from a Fall 2012 survey of e-learning

students revealed that, of the reasons for dropping an online course, personal reasons such as health, family, or finances were a major factor (SDCCD 2013).

Other research studies point to personal problems accounting for as much as 43 percent of the reasons for dropping. These barriers to online course completion are situational for the individual's social, economic or personal environment (Darrow 2011).

The next section in this chapter will consider what practical strategies an institution might implement to support students with personal challenges and also what strategies have proven effective for retaining elearners in general.

Key Question No 2: What <u>institutional factors</u> influence online student retention and success? Institutional Resources and Support Factors

While many of the individual student factors that impact retention are out of the control of e-learning leaders, institutions that offer e-learning do have control over the support that they provide and the ways in which they address the barriers that hamper student retention (Distance Education Report 2009, p. 2). In order for e-learning to be a successful method of educating students, the institution must strategically plan and budget for institutional resources and support. The role of e-learning in the mission and goals of the institution must be clearly defined and the institutional parameters for online operations must be established. It is necessary that the institution be prepared and equipped to offer student services to current and prospective e-learners equivalent to the range of services offered to traditional oncampus students and available beyond traditional business hours. Student services that are essential for supporting and retaining e-learners are:

Admissions, Counseling/Advising, Financial Aid, Tutoring, Library, and Technical Support (Distance Education Report, November 2009). Personnel trained and dedicated to providing e-learning support need to be present.

Additional institutional factors that impact the retention of e-learners are the following:

 Administrative Support. Policies and procedures that clarify the role of e-learning, with designated leadership to implement, monitor, and manage the program are necessary to ensure that the elearning students, faculty, and the staff have clear pathways and structure to be successful. Processes and institutional expectations for all aspects of e-learning should be transparent to students before they enroll.

- Technical Infrastructure. A robust system of hosting, managing, and delivering the e-learning courses as well as securely authenticating the user accounts is undoubtedly necessary to prevent student frustration that can lead to dropping out of e-learning courses. In fact, Frith and Kee (2003) found that when the technical issues caused the system to be unreliable and unstable or when there was a lack of assistance in working through student technical issues with the course, students' e-learning success was negatively affected.
- Curriculum Development. The quality of the course curriculum in meeting student goals— whether to attain a degree, transfer from a two-year to a four-year institution, or prepare for a career—is essential for motivating and retaining e-learning students. Although the learning outcomes for e-learning and traditional oncampus instruction are equivalent, curriculum development for e-learning requires adaptations in the types of content, organization, resource materials, and assessment methods that comprise the course. Faculty who are responsible for developing, reviewing, and approving the curriculum for e-learning should have first-hand experience with teaching online in order to make informed decisions about the curriculum that comprises the courses and programs that are approved for distance education delivery.
- Instructional Support and Training. As we will see in the next section of this chapter, the instructional methods used by faculty are essential for motivating and retaining e-learners. Therefore, a critical component of an institution's e-learning program is providing faculty with the tools and techniques for teaching online. This support needs to begin prior to being given an assignment to teach an e-learning course. Individualized and customized assistance in designing the course, training in best practices for teaching online, and ongoing assistance with managing the e-learning environment and all aspects of student learning are vitally necessary to ensure that student retention and success strategies are being implemented.

- Learning Communities. Just as oncampus students have places set aside on campus where students can join clubs, meet to study and socialize, the e-learning environment can provide the same opportunities through social networking tools that are either built into the course delivery platform or are part of an institutional portal. Students can form study groups online, connect with other students who are pursuing the same career and educational goals, or just create contacts to be in their networks. Learning communities build a sense of connection to the institution that foster retention, persistence, and perhaps even loyalty after graduation as alumni. We will discuss the importance of learning communities within the course itself later in this chapter in the section on instructional strategies for retaining e-learners.
- Early Alert Systems. Technology systems such as Starfish (http://www.starfishsolutions.com) that gather student data to identify students at risk for withdrawing from class are becoming more prevalent as an e-learning retention strategy. Students who have not been logging into the e-learning courses and submitting assignments, students who are earning low grades, or students who are exhibiting other low-performance indicators will trigger an alert that can be addressed. These types of student success analytics promise to help an institution improve the rates of student retention and persistence.

The final section in this chapter will consider the instructor's role and impact on online student motivation and retention.

Key Question No. 3: What can the <u>instructor</u> do to improve online student motivation and retention?

Effective Practices that Make a Difference

Up to this point, the e-learning motivation and retention strategies in this chapter have focused on the student and institutional aspects for success. While the characteristics of successful e-learners and the institutional support policies and practices are most often beyond the purview of the faculty, in this next section, we will examine the critical impact that individual instructors have on the motivation and retention of their students.

It has been well established that the instructor plays a vital role in the online learning process. While it has often been said that the instructor in an e-learning course is the "guide on the side" rather than the "sage on stage," we believe that this notion that the instructor merely facilitates the course and primarily is there to answer questions from students when needed lacks a clear understanding of the importance and effectiveness of the instructor role.

As Meyer et al (2006) pointed out, while students were initially attracted to an online program because of the convenience, what kept them enrolled was the instructional quality of the program and the nature of the relationships with the online faculty.

Satisfaction with the experience of being an e-learner is directly related to these factors:

- Instructor attitude towards online learning and online learners.
- Instructor understanding of the pedagogy of online student motivation and retention.

A study by Sun et al. (2008) found that the attitudes of instructors towards online learning had an impact on students. Students were more motivated when their instructors were enthusiastic and exhibited a positive attitude about the subject matter and the students' ability to succeed. When the instructor is engaged and involved with the students as they perform the learning activities, students were more likely to be satisfied.

Faculty who are selected to teach online need to be well trained and prepared to meet the challenges of teaching online. In addition to being trained to use the course delivery system, the course management

tools, the digital media creation and other technologies, faculty need to have training in the pedagogy or andragogy of online learning and then receive support as they develop, teach, and manage their courses.

One of the benchmark works on instructional strategies that encourage and motivate students is that of Chickering and Gamson (1987). Their "Seven Principles for Good Practice" provide an excellent foundation for e-learning instructors because they directly address the techniques that foster success in the e-learning classroom.

- 1. Encourage contact between students and faculty. Right from the start.
- 2. Develop reciprocity and cooperation among students. Create a community of learners.
- 3. Encourage active learning and student engagement. Offer frequent opportunities to participate.
- 4. Give prompt feedback. Personalize the feedback to each learner. Use rubrics to streamline grading.
- 5. Emphasize time on task. Time plus energy equals learning.
- 6. Communicate high expectations. Recognize accomplishments and foster a sense of achievement and progress.
- 7. Respect diverse talents and ways of learning. Vary the activities and method of delivering content. (Chickering and Gamson, 1987).

Online student motivation is positively impacted when the course material is relevant, varied, interesting, challenging, and presented in a learning environment that encourages students to do their best.

An interesting piece by faculty at Park University took an in-depth look at online student motivation. In their paper they provided a chart to guide instructors with strategies to implement throughout the course, starting with the week before it starts through the final week of the course (Dennis et al. 2007).

For example, Dennis et al. (2007) propose that, in the week prior to opening day, instructors establish a preview week where students can login, view the syllabus and introductory materials with clear instructions about how the course will be conducted. If contacting students before the class is not feasible, then instructors can send students a welcome email with start-up instructions early on the first day.

Strategic Steps by the Instructor Prior to Opening Day could include:

- Post his/her photo and a friendly introduction.
- Create a thread to post weekly Teacher's Tips & Tricks and invite student sharing of their best tips.
- Create a virtual lounge—an ungraded area for students only.
- Ask students to self-assess their readiness for e-learning, their knowledge of the subject matter, their goals and areas where they would like to improve their learning skills.

Day 1 of the Course:

- Vividly describe the course's value and relevance.
- Login 2-3 times; be responsive and genuinely enthusiastic.
- Clarify expectations: Let students know the turnaround time they can expect for responding to emails and for receiving their graded assignments and exams.
- Summarize self-assessments and improvement goals; urge peer support to create a community of learners
- Recognize every student in some manner.
- Internalize caring and show sincere interest.
- Provide rubrics that clarify the grading standards for assignments and activities such as discussions.
- Clarify policies such as whether you will accept work turned in after the deadline.

End of Week 1:

- Urge formation of peer learning support teams.
- Continue to login regularly and respond to students promptly.
- Demonstrate and promote deep learning versus superficial thinking.
- Clarify course expectations, performance, and grading
- Instructor asks him/herself: What effect am I having upon my students' motivation to learn?

Weekly Strategies:

- Promote critical thinking via good questioning
- Encourage linkages with the course to life experiences and current events.
- Illustrate standards of expected performance.
- Praise, reinforce quality efforts
- Give personalized feedback to each student.

Correct privately and respectfully.

At Midterm:

- Summarize course journey to date.
- Post and praise evidence of student learning improvement.
- Ask the students for feedback on what is/isn't working well in the course.
- Continue using a psychological lens to view each student's attitude, effort, and performance and adjust yours accordingly.

Strategies for the Final Week of the Course

- Summarize and reinforce the Core Learning Outcomes within the context of their career aspirations and to the global society.
- Urge students to explore the more complex issues and their implications on a broader scale.
- Reflect upon the lessons learned while teaching this course for future use, and ask yourself, "How can
 I use these experiences to improve my own teaching and learning?" (Dennis et al. 2007)

E-learning instructors need to have their own "Online Retention Toolkit"--selecting, experimenting, and creating what works for their subject matter, their style of teaching and the learning styles of their students.

Instructional techniques that impact student satisfaction and motivation to complete their course and enroll in future e-learning courses are based on these proven best practices in the pedagogy of online retention.

Conclusion

Strategies for motivating and retaining e-learners have been researched, discussed, and analyzed for the past 15 years in the literature, in webinars, blogs, and at professional conferences. From our review, it is clear that e-learning can and should be redesigned to ensure that students are well prepared in advance of enrollment, that the critical institutional support structures, resources, policies, and procedures are in place, and that instructors be provided with thorough training and support throughout the course design, development, and on an on-going basis. The unique requirements of successful e-learning programs and the special needs of online students and faculty must continue to be recognized and addressed if we are to continue to make progress and be recognized without hesitation as an effective method of learning.
