What Can I Do with This Major?

Aeronautical Non-Destructive Inspection

Nondestructive Testing (NDT) is a set of methods used to evaluate the materials, components, or systems of a product to detect flaws and discontinuities without causing damage to the part being tested. The certificate program includes coursework to help students prepare for the non-destructive inspection level I and level II certifications. Please note, students will have to complete the required number of work experience hours for level I and level I certifications outside the classroom instruction.
