

What Can I Do with This Major?

Auto Body

The Auto Body program is a vocational program designed to provide entry-level pre-employment instruction and hands-on skills and technical entry-level knowledge of modern auto body shop procedures. The program consists of 3 main components: auto collision repair, automotive refinishing, and a combination of both, which is highly recommended. Students are taught in a facility that is equipped with the same modern state-of-the-art equipment and tools used in top-notch auto body shops of today. Students are trained on actual collision-damaged vehicles and engage in industry-like procedures that range from estimating damage through collision repair, refinishing, and detail for delivery.
